1 Introduction
UOB Group's Pillar 3 Disclosure Report ("The Report") is prepared in accordance with the Monetary Authority of Singapore ("MAS") Notice to Banks No. 637 "Risk Based Capital Adequacy Requirements for Banks Incorporated in Singapore".

The Report is governed by the Group Pillar 3 Disclosure Policy which specifies the Group's Pillar 3 disclosure requirements, frequency of disclosure, medium of disclosure, and the roles and responsibilities of various parties involved in the disclosure reporting. The Policy is reviewed at least annually and approved by the Board.

The Report facilitates an assessment of the Group's capital adequacy and provides an overview of the Group's risk profile.

## 5 Composition of Capital

### 5.1 Reconciliation of Regulatory Capital to Balance Sheet

Table 1 and Table 2 are mandatory disclosures prescribed in MAS Notice 637 requirements.
Table 1 shows the reconciliation between the Group's published consolidated balance sheet and the regulatory capital components. Details of the regulatory capital components are set out in Table 2, as referenced.

The scope of consolidation for accounting and regulatory purposes is similar, except that subsidiaries which carry out insurance business are not consolidated for regulatory purpose. The list of the Group's major insurance subsidiaries can be found in the Group's Annual Report. As at 31 December 2019, both the total assets and the total equities of each of these subsidiaries were less than $\$ 1$ billion.

Compared with 30 June 2019, key movements in the items under the column "Under regulatory scope of consolidation" were mainly from earnings in the second half of 2019, payment of dividends, and issuance and redemption of capital instruments.

(2) US $\$ 500 \mathrm{~m} 3.5 \%$ subordinated notes were first issued on 16 March 2016 This was followed by a re-tap for US $\$ 200 \mathrm{~m}$ on 24 March 2016 , which was
consolidated and formed a single series with the US $\$ 500 \mathrm{~m}$ tranche issued onsolidated and 16 March 2016.

The Basel III framework introduced Leverage Ratio as a non-risk-based backstop limit to supplement the riskbased capital requirements. It aims to constrain the build-up of excess leverage in the banking sector, with additional safeguards against model risk and measurement errors. Leverage ratio is expressed as Tier 1 Capital against Exposure Measure, which comprises on- and off-balance sheet items. Other than the difference in scope for consolidation and aggregation under SFRS and MAS Notice 637, there are no material differences between total balance sheet assets (net of on-balance sheet derivative and SFT assets) as reported in the financial statements and Exposure Measure of on-balance sheet items.

### 6.1 Leverage Ratio Summary Comparison Table

${ }^{3}$ Computed using quarter-end balances
As at 31 December 2019, the Group's leverage ratio was $7.7 \%$, a $0.1 \%$ increase quarter-on-quarter, primarily due to reduced exposures from lower asset base.

7 Macroprudential Supervisory Measures

### 7.1 Geographical Distribution of Credit Exposures Used in the Countercyclical Capital Buffer

To achieve the broader macroprudential goal of protecting the banking sector from periods of excess aggregate credit growth, the Basel III standards introduced the Countercyclical Capital Buffer (CCyB) framework. The CCyB is applied on a discretionary basis by banking supervisors in the respective jurisdictions.

The Group's countercyclical buffer is computed as the weighted average of effective CCyB in jurisdictions where the Group has private sector credit exposures and the geographical distribution of the private sector credit exposures is based on where the ultimate risk of the exposure resides. Following mandatory disclosure under MAS Notice 637 provides an overview of the Group's private sector credit exposures by geographical breakdown.

### 7.2 Disclosure of G-SIB Indicators

The Basel Committee on Banking Supervision (BCBS) assesses the systemic importance of banks in a global context and has developed an indicator-based methodology for identifying Global Systemically Important Banks (G-SIBs). The 12 indicators are based on cross-jurisdictional activity, size, interconnectedness, substitutability/financial institution infrastructure and complexity.

Although UOB is not a G-SIB, it is required under MAS Notice 637 to disclose these 12 indicators on an annual basis. The indicators have been prepared in accordance with the instructions issued by the BCBS. Further details on the 12 indicators and assessment methodology are available at BCBS website: http://www.bis.org/bcbs/gsib/

G-SIB Indicators of UOB Group as at 31 December $2019{ }^{4}$

${ }^{4}$ Previous disclosures are available at UOB website: www.UOBgroup.com/investor-relations/financial/index.html.
5 Total exposures differ from the total exposures disclosed under Leverage Ratio as the computation required by the BCBS for purpose of the G-SIB assessment exercise excludes regulatory adjustments.

## 8 Overview of RWA

The table below lists the Group's RWA by risk type and approach, as prescribed under MAS Notice 637. The minimum capital requirement is stated at $10.0 \%$ of RWA.

Total RWA was $\$ 5.3$ billion lower quarter-on-quarter mainly due to lower asset base.

### 9.2 Main Sources of Differences between Regulatory Exposure Amounts and Carrying Amounts in Financial Statements

The following table illustrates the main differences between the regulatory exposure amounts and the carrying values in the financial statements in respect of the assets and liabilities subject to credit risk, CCR and securitisation framework requirements.

It is not meaningful to include items subject to market risk requirements as they are based on a different exposure measurement approach.

### 9.3 Qualitative Disclosure of Differences between Carrying Amounts in Financial Statements and Regulatory Exposure Amounts

The main differences between accounting amounts as reported in financial statements and regulatory exposure amounts are:
(i) off-balance sheet exposures including contingent liabilities and commitments after application of Credit Conversion Factor
(ii) securities financing transactions counterparty exposures and potential future exposures for derivatives, offset by netting under enforceable netting agreements

### 9.4 Prudent Valuation Adjustments

The table below provides the breakdown of the constituent elements of the Group's prudent valuation adjustment.
This prudent valuation adjustment is applicable for all assets measured at fair value (Marked to market or Marked to model) and for which valuation adjustments are required.

The main contributions to the prudent valuation adjustment are Day 1 Funding cost for Total Return Swap and Day 1 break fund cost for Structured Notes.

## 10 Credit Risk

### 10.1 General Qualitative Disclosures on Credit Risk

Please refer to UOB Annual Report 2019, Risk Management section - Credit Risk.

### 10.2 Credit Quality of Assets

The table below provides an overview of the credit quality of the Group's on- and off-balance sheet assets. A default on the obligor is considered to have occurred when either or both of the followings have taken place:

- The obligor is unlikely to pay its credit obligations to the Group in full, without recourse by the bank to actions such as realising security (if held).
- The obligor is past due more than 90 days on any credit obligation to the Group. Overdrafts will be considered as being past due once the outstanding has breached an advised limit.

### 10.3 Changes in Stock of Defaulted Loans and Debt Securities

The table below provides the change in defaulted exposures, the flows between non-defaulted and defaulted exposure categories and reductions in the defaulted exposures due to write-offs.

## As at 31 December 2019

| $\$ \mathrm{~m}$ | $\mathbf{( a )}$ |  |
| ---: | :--- | ---: |
| 1 | Defaulted loans and debt securities at end of the previous semi-annual reporting period | $\mathbf{4 , 1 2 3}$ |
| 2 | Loans and debt securities that have defaulted since the previous semi-annual reporting period | 922 |
| 3 | Returned to non-defaulted status | $(99)$ |
| 4 | Amounts written-off | $(129)$ |
| 5 | Other changes | $\mathbf{( 5 8 8 )}$ |
| 6 | Defaulted loans and debt securities at end of the semi-annual reporting period (1+2+3+4+5) | $\mathbf{4 , 2 2 9}$ |

The increase in defaulted loans and debt securities in the second half of 2019 was mainly due to higher inflow of new defaulted loans relative to the outflow of defaulted loans from recoveries, write-off and returned to nondefaulted status. Other changes mainly comprise of recoveries and foreign exchange.

### 10.8 SA(CR) and SA(EQ) - Credit Risk Exposure and CRM Effects

The following table illustrates the effects of CRM on the calculation of Group's capital requirements for credit exposures under $S A(C R)$ and $S A(E Q)$.

Compared with 30 June 2019, the increase in RWA were mainly driven by higher exposures to Corporate and PSE asset classes.

10．12 IRBA－Effect on RWA of Credit Derivatives used as CRM
As at 31 December 2019，the Group did not use credit derivatives as credit risk mitigant for exposures under IRBA．

## 10．13 IRBA－RWA Flow Statement for Credit Risk Exposures

The following table presents changes in RWA corresponding to credit risk only（excluding CCR）over the quarterly reporting period for each of the key drivers．

The Group＇s RWA decreased mainly due to lower asset base．

The following table shows the backtesting of PD of non-retail portfolios whose exposures are under F-IRBA for capital computation. The non-retail portfolio comprises of Sovereign, Bank, Corporate, Corporate Small Business, and Specialised Lending IPRE exposures. Refer to UOB Annual Report Credit Risk Management for the percentage of RWA covered by non-retail exposures.

## 冊UOB

### 10.14 IRBA - Backtesting of PD per portfolio (cont'd)

The following table shows the backtesting of PD of retail portfolios whose exposures are under A-IRBA for capital computation. The retail portfolio comprises of Residential Mortgage, QRRE and Other Retail exposures. Refer to UOB Annual Report Credit Risk Management Section for the percentage of RWA covered by the retail exposures.

Increase in new defaulted obligors for Other retail exposures asset sub-class (excluding exposure to small business) for PD range $10 \%$ to $<100 \%$ in the Annual Reporting Period is due to non-borrowing accounts with overdue fees that do not meet the minimum balances. Without these accounts, there are only 5,916 defaulted obligors in the annual reporting period (compared to 6,161 defaulted obligors as at 31 December 2018) and 214 new defaulted obligors in the annual reporting period (which are similar with last year report).

10.15 IRBA - Specialised Lending

The following table provides the exposure amount and RWA of the Group's specialised lending portfolio under Supervisory Slotting Criteria.

Compared with 30 June 2019, total exposures for specialised lending under Supervisory Slotting Criteria remained relatively stable. The increase in RWA was driven by an increase in loan tenure for exposures under Project Finance asset class.

### 11.5 IRBA - CCR Exposures by Portfolio and PD Range

The following table sets out the relevant parameters used for the calculations of CCR capital requirements for IRBA models.

Compared with 30 June 2019, the increase in EAD was mainly due to higher repurchase transactions with bank counterparties, partially offset by reduction in repurchase transactions from Corporate and Sovereign asset classes.

### 11.6 Composition of Collateral for CCR Exposures

The following table provides the breakdown of all types of collateral posted or received by the Group to support or reduce the CCR exposures related to derivative transactions or to SFTs.

Compared with 30 June 2019, the increase in collaterals posted and received for SFT transactions was mainly due to increase in repurchase agreement transactions. The decrease in collaterals used in derivative transactions is in line with the sale of assets by a wholly owned subsidiary of the Group, UOB Bullion and Futures Limited.

## 15 Interest Rate Risk in the Banking Book

Interest rate risk is the impact to earnings and economic value of the Group due to fluctuations in interest rates. Interest rate exposure arises from differences in the maturity and repricing dates of assets, liabilities and offbalance sheet items. These mismatches are actively monitored and managed as part of the overall interest rate risk management process which is conducted in accordance with the Group's policies as approved by the ALCO.

The Group's interest rate risk sensitivity is measured as changes in economic value of equity ("EVE") or net interest income ("NII") based on new Basel IRRBB requirements. At 100 and 200 basis points parallel interest rate shocks, worst case results were negative $\$ 803$ million and $\$ 1,676$ million (2018: negative $\$ 779$ million and $\$ 1,589$ million) respectively, driven mainly by the Group's SGD and USD positions.

EVE is the present value of assets less present value of liabilities of the Group. NII is the simulated change in the Group's net interest income. The repricing profile of loans is generally based on the earliest possible repricing dates, taking into account the notice period to be served to the customers. Interest rate flooring effects are taken into consideration. Loan prepayment and time deposit early withdrawal rates are estimated based on past statistics and trends where possible and material. Behavioural assumptions based on historical trends are applied where appropriate. The average repricing maturity of core non-maturity deposits is determined through empirical models taking into account asset duration. Risk-free zero coupon curves are used for EVE discounting. Currencies are aggregated by scenarios. There may be some differences in the assumptions across geographical locations due to variation in local conditions.

Please refer to UOB Annual Report 2019, Risk Management section - Interest Rate Risk in the Banking Book for more information.

## 16 Liquidity Coverage Ratio Disclosures

### 16.1 Liquidity Coverage Ratio

The Liquidity Coverage Ratio ("LCR") ensures that a Bank has sufficient unencumbered high quality liquid assets ("HQLA") to survive a significant stress scenario for the next 30 days. The Group's LCR disclosure is as per MAS Notice 651 "Liquidity Coverage Ratio Disclosure".

Quarterly average All Currency LCR and Singapore Dollar LCR of 149\% and 315\% respectively were comfortably above the regulatory requirements of 100\%. 92 calendar days' data points were used in calculating the average figures. Compared to 3Q2019, increase in All Currency LCR was mainly due to lower average unsecured wholesale funding; partially offset by lower HQLA. Decrease in SGD Dollar LCR was mainly due to lower HQLA. The main drivers of LCR are the net cumulative outflow driven mainly by deposit profile and the portfolio of high quality liquid asset which would cause some volatility on a day to day basis. The Group's HQLA composition comprised $94 \%{ }^{9}$ Level 1 HQLA and the remaining in Level 2A and 2B HQLA. Deposit strategies are regularly discussed in Group ALCO with monitoring on deposit concentration and currency mismatch etc. The Group's exposures to derivatives and potential collateral calls were incorporated into the LCR outflows.

Daily liquidity management is centrally managed under Global Markets-Portfolio \& Liquidity Management with regular discussion with Central Treasury and relevant Business Units. Liquidity limits and triggers were established to limit the Group's liquidity exposure. Balance Sheet Risk Management oversees the liquidity risk management in the Group. Contingency funding plans are in place to identify potential liquidity crisis using a series of early warning indicators as well as crisis escalation process and related funding strategies.

17 Net Stable Funding Ratio Disclosures
The Net Stable Funding Ratio ("NSFR") measures the amount of available stable funding relative to the amount of required stable funding in a bank and promotes resilience over a longer time horizon. The bank is required to maintain a stable funding profile in relation to the composition of their assets and off-balance sheet activities.

The Group is subjected to NSFR standards effective January 2018. NSFR disclosure is as per MAS Notice 653 "Net Stable Funding Ratio Disclosure". NSFR for 31 December 2019 and 30 September 2019 were 111\% and 107\% respectively, above the regulatory requirement of $100 \%$. Increase in NSFR in the $4^{\text {th }}$ quarter was largely due to higher stable funding from retail and wholesale deposits. In the $3^{\text {rd }}$ quarter, decrease in NSFR was largely due to growth in long term loans. The main drivers of NSFR are the composition and profile of deposits and capital in relation to loans. Interdependent asset and liabilities reported include government funded loans and gold savings accounts backed by gold in accordance with criteria stated in MAS Notice 652.
