Grow your business value chain with UOB APIs

UOB Application Programming Interface (API) Services

Integrate seamlessly with our banking services for greater efficiency.

Right By You

Overview

API is a method of communication between applications to facilitate information exchange, which enables various software applications to interact and exchange data with the bank directly, without need for human intervention.

UOB API services provide you with a channel that facilitates real-time banking services e.g., access account information or make instant payments securely without having to log on to online banking. Integrate with UOB APIs to create new dynamic solutions quickly and economically.

Our APIs

Client to Bank API Services

Benefits

Gain access to a host of features for greater efficiency when you integrate your applications with UOB API.

Balance enquiries and transaction history
View your account balances using your own applications without the need to log on to internet banking

Real-time payments
Initiate real-time payments including payment refunds via your applications

Instant notifications
Receive real-time alerts for all credit and debit transactions containing comprehensive transaction details for your easier reconciliation

Expanded collaboration with ecosystem partners
Enable a new level of interaction and collaboration with your customers and partners with enhanced workflows

Accurate cash position and account reconciliation
Connect to your applications to retrieve transactions and account information in real-time

Greater peace of mind
Leverage industry-recognised open network* and security protocols for secured data transmissions.

* UOB API services have been enhanced in line with the National Standard for Open API Payment (SNAP) deployed by Bank Indonesia (Central Bank)
